Teach Coding with
Confidence

What is STEMscopes Coding?

- + Real-world typed JavaScript coding accessible to all students
- + Students design and build their own apps to share on any device
- + Supports core subjects: science, math, computer technology, and ELA

Students have a blast while learning how to code, create, and share their own, personalized apps. Teachers need no prior coding experience, and students can easily figure it out on their own!

Reach a new level of STEM
\$3.95 per student per year

with a maximum price of \$2,495 per campus

"I learned how to code my own game, which was highly exciting!"

"I learned how to actually code instead of having the code already handed to me to put in the right place."

"I learned that in order for something to work, you must speak or type the language computers can understand."

— Summer Coding Campers
